PUMP SIZING

For product longevity, BW Solar strongly recommend upsizing the pumping system if operating close to the limit of the pump systems lift or flow rate capability. Operating above the pumps capabilities will reduce life and increase chance of failure due to stress on the entire system.

WARRANTY

Waterboy pumps have averaged less than 1.5% warranty return rates over the last 5 years, as of 1st July 2023 warranty is increasing to 3 years on complete systems. All drive packs have a 2 year warranty.

TDH - Total Dynamic Head
is the calculation of vertical meters lift plus any friction loss in the delivery pipe. A bigger pipe size will help reduce friction and increase the pumps longevity.

L/DAY - Performance based on 6 peak sun hours of pumping. Summer months you can expect 20% more water per day and winter months 20% less.
